

# Making words work to support mathematical understanding and reasoning

**Therese O'Sullivan, Learning Improvement consultant**

# Objectives

This workshop is designed to:

- Support delegates in ensuring speaking and listening has a high profile within the mathematics curriculum, being used to challenge and stimulate thinking and reasoning skills.
- Share effective engagement strategies and practical language-based activities to scaffold, develop and extend children as articulate and independent mathematicians.
- Give staff a greater awareness of how to make the maths curriculum more accessible and engaging for EAL learners.

# Aims of the mathematics curriculum

- ❖ become **fluent** in the fundamentals of mathematics - develop *conceptual understanding*; varied/frequent practice with increasingly complex problems over time; able to recall and apply knowledge rapidly and accurately to problems
- ❖ **reason mathematically** – follow lines of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language
- ❖ **solve problems** – apply mathematics to a variety of routine and non-routine problems; increasing sophistication; breaking down problems into simpler steps ; persevering in seeking solutions

# Mathematics

- 3 areas of vocabulary to consider:
- **Subject specific**
- square, triangle, number, three, add,
- **General but subject specific**
- order, take-away, light, watch, hands, face
- **Academic vocabulary related to logic, logical conclusions, possibility etc.**
- If ..... then.....because .....must be .....can't be .....could be ..therefore ..the language of comparison (bigger, biggest etc.)

# Types of talk

- Argument
- Comparison
- Deduction
- Description
- Evaluation
- Explanation
- Hypothesis
- Opinion
- Predicting
- Retelling
- Sequencing
- Summarising

# Talk frames

- Talk structures need to be modelled and given to pupils to enable them to verbalise their thinking and learning.
- *Speaking frames* provide models of sentence construction, language structures, and vocabulary for learners to use orally within a curriculum context.

# Speaking and writing frames

- **Sentence starters** are useful for example in practical subjects when learners are asked to evaluate a project they have taken part in, and say, or write, what they have learnt from the experience. *'I learnt that ...'* *'One thing I discovered was ...'*, *'I found out that ...'*
- **Sentence frames** are helpful when asking learners to organise their thoughts in a particular way, e.g. justifying their answer: *'I know that this is a \_\_\_\_\_ because it has \_\_\_ corners and \_\_\_ angles.'*

# Talk Frame for reasoning

- I agree with...because
- It might be/ It could be...because...
- I disagree with... because
- **It couldn't be...because...**
- In my opinion/ I think it must be...because
- I've changed my mind....

# Talk Frame for Reporting Back

- I / we worked with...
- I / we did...
- First of all ...
- After that...
- *Next...*
- Finally...
- The problems were ...
- I / we solved the problem by ...
- I / we knew that the answer had to be bigger than ...

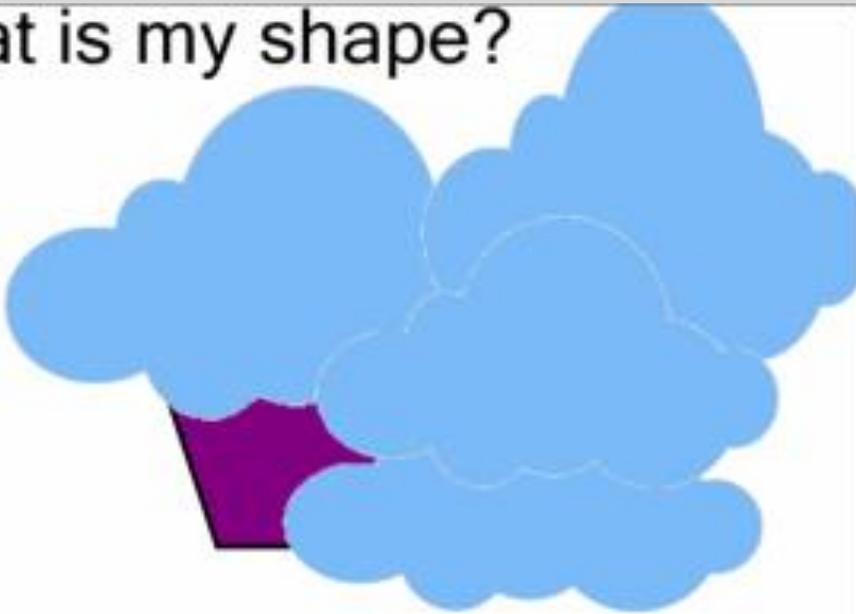

# Talk frames

What is my shape?

sides  
straight  
curved

equal length  
different length

corners

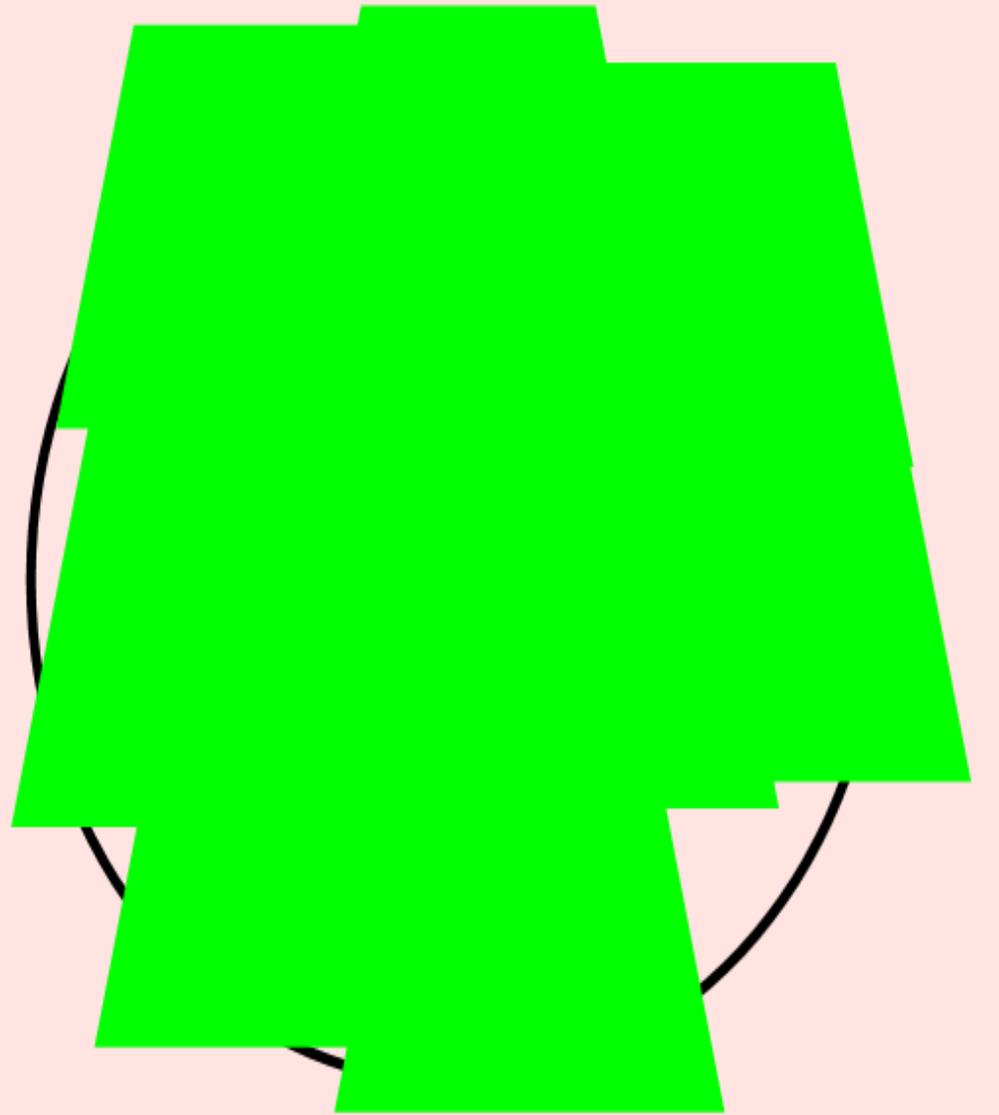

This shape can't be a ... because...

Model: This shape could be a triangle because I can see 2 straight lines and one angle. It is possible that there is another straight line linked to those 2 lines to make a triangle. It could also be a \_\_\_\_ because it is possible there are \_\_\_ more straight lines to complete this shape.

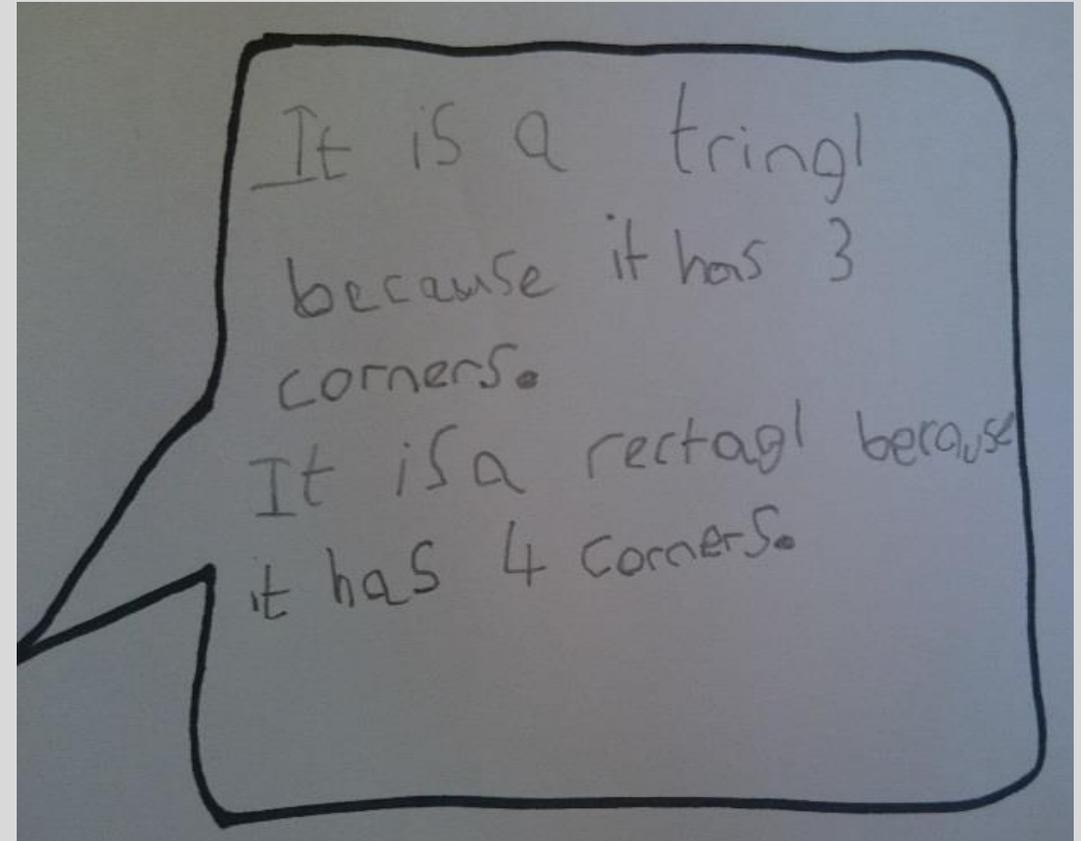

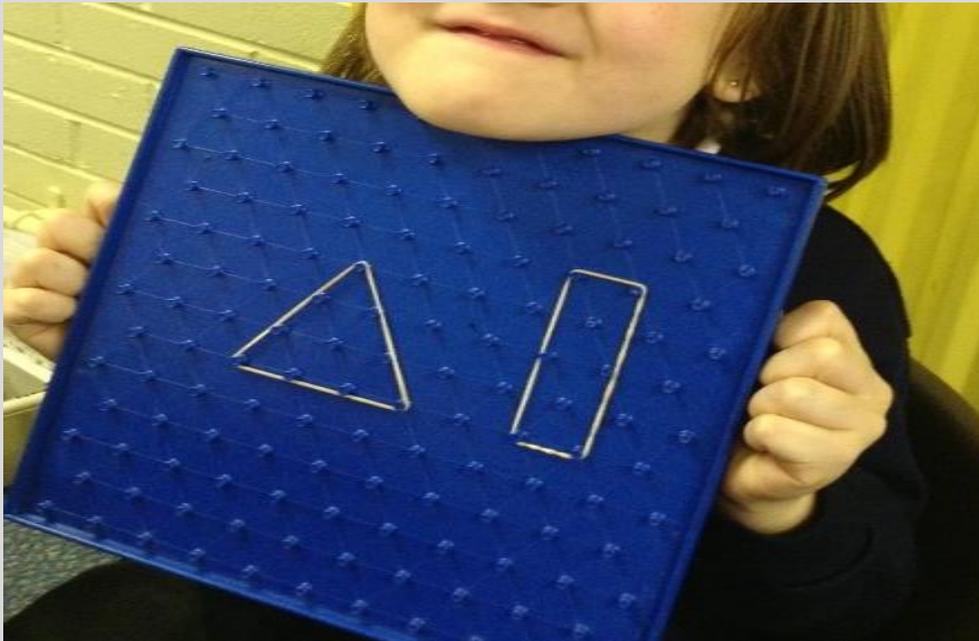

This shape couldn't be a \_\_\_\_\_ because.....

It is a ... because...

It is a Circle  
because it is  
round.

# Sentence Stems

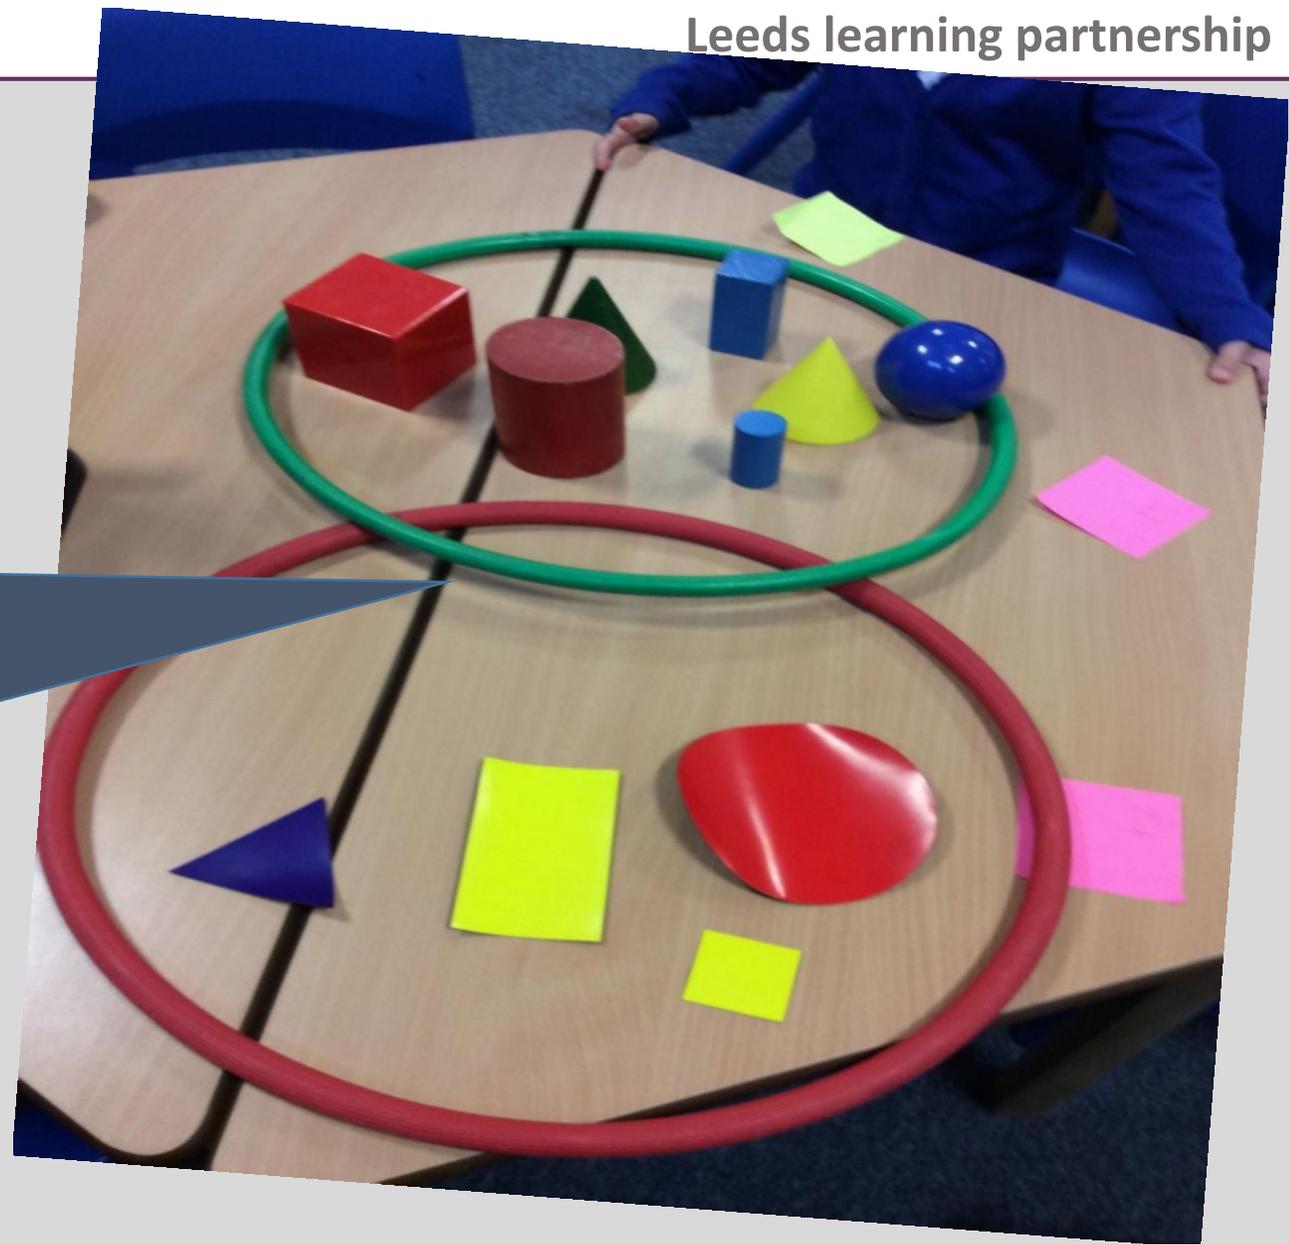

These helped the children to use the vocabulary in context

## Sentence Stems

I know it is a cylinder  
because it has 2 circle  
faces.

I know it's not a cone  
because it has no vertices

WALT: Recognise coins and their value.

(I)

24.3.15

The children were introduced to the different coins that we use in England and we named each one. They then worked in mixed ability pairs to identify the features of each coin. As a group they then presented their work to the rest of the class. We looked at similarities and differences between the coins and talked about how we could tell which was which.

To encourage the children to use the correct vocabulary we used a talk frame:

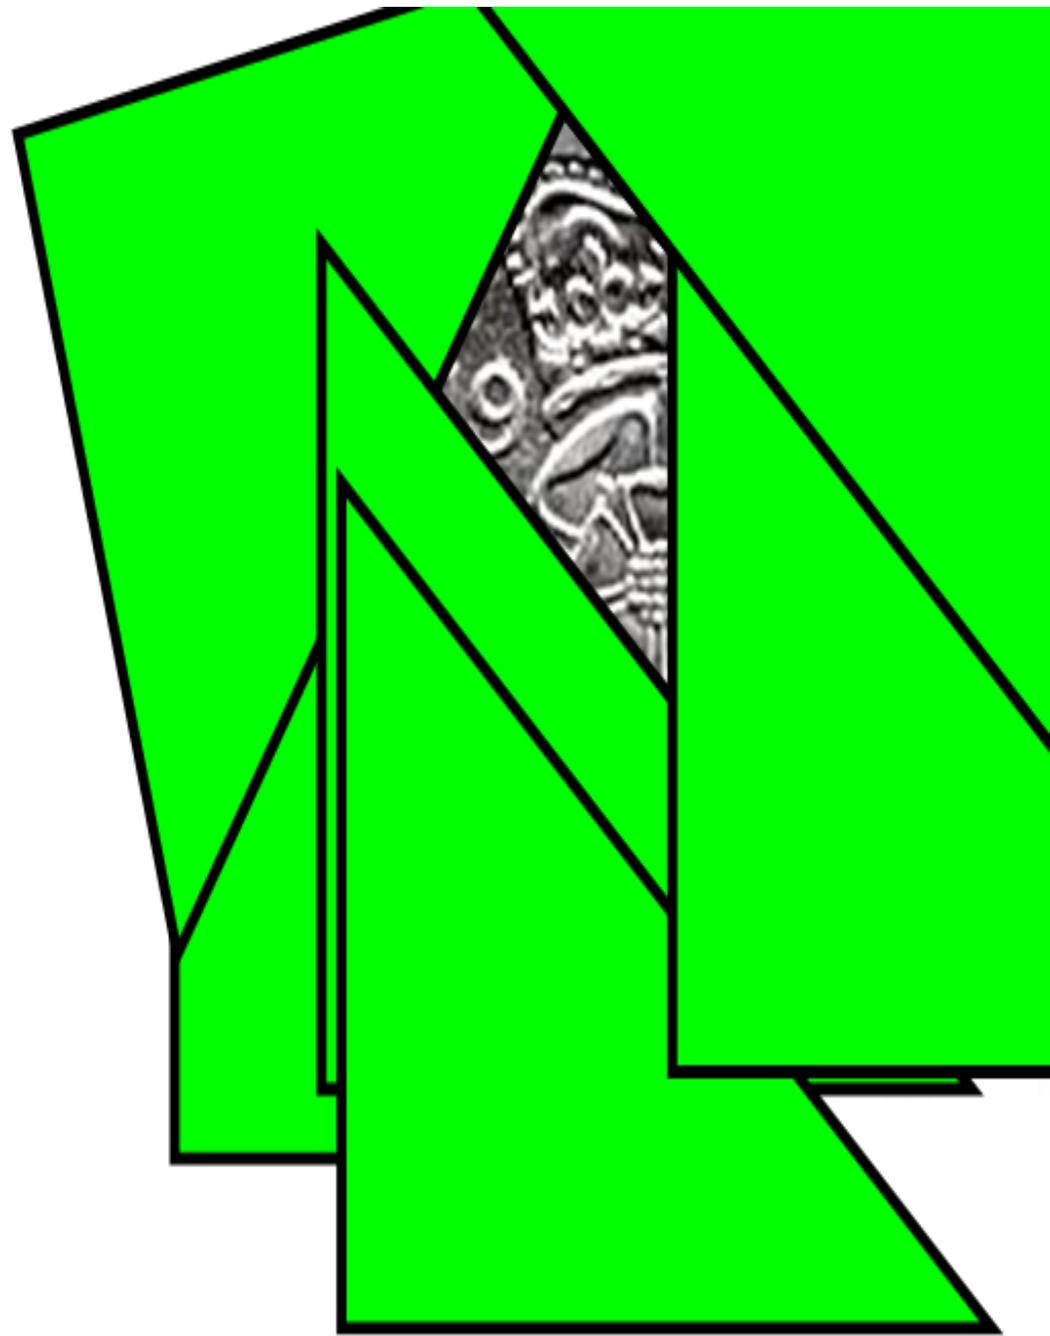

- It is a ... because...
- It isn't a ... because...

This coin is a ... because...

It isn't a ... because...

It is 20p because  
it's silver and I can  
see a crown

# Our Reasoning Rich Classroom

maths

- I noticed that...
- I already know
- It won't work because...
- It must be because
- It could be because
- It can't be because
- I looked for pattern/rule/sequence/relationship
- I tried and this happened
- If then...

I noticed that 1 pair of knee socks + 3 pairs of ankle socks = £12.95  
 $5.45 + 7.50 = 12.95$

If she spent £12.95, then she got £7.05 change

$£8.50 \times 3 = £25.50$   
 $3 \times 5 \text{ pairs} = 15 \text{ pairs}$

$£20.00 - £12.95$   
 To column or not?  

$$\begin{array}{r} 20.00 \\ -12.95 \\ \hline 07.05 \end{array}$$
  
 Which is more efficient?

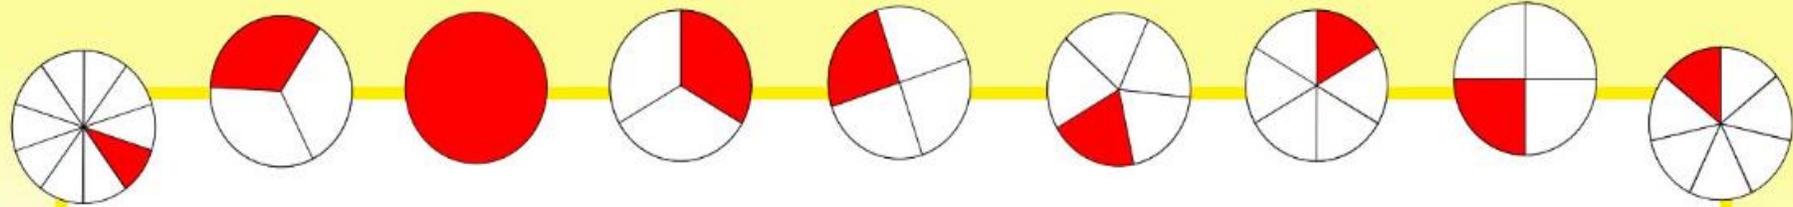

8.50 I tried adding  
 8.50 lots of 8.50  
 8.50 until I got to  

$$\begin{array}{r} 8.50 \\ 8.50 \\ 8.50 \\ \hline 25.50 \end{array}$$
  
 25.50

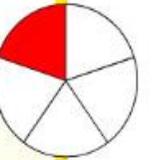

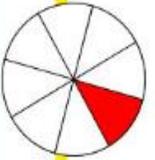

It can't be 3 because it says 5 pairs = £8.50 and she spent £25.50.

millions	hundreds	ten thousands	thousands	hundreds	tens	ones	tenths	hundredths	thousandths
1 000 000	100 000	10 000	1 000	100	10	1	0.1	0.01	0.001

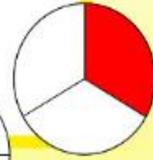

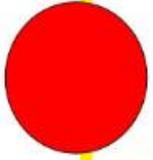

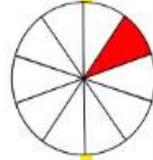

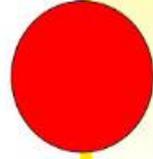

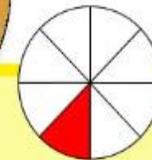

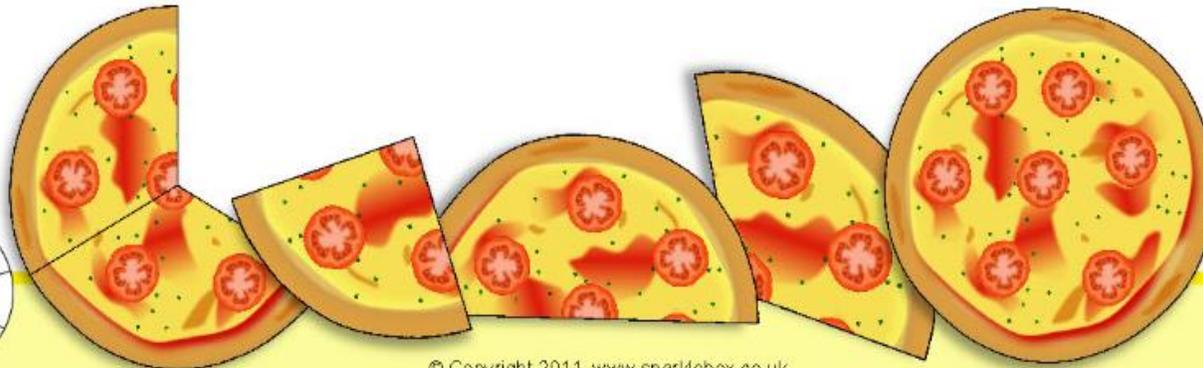

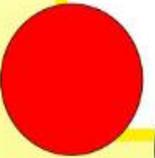

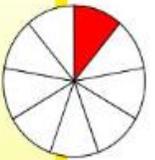

This fraction is a \_\_\_\_\_ because .....

This fraction isn't a \_\_\_\_\_ because .....

part, equal part, one whole, half, quarter, third

# The Primary Mastery Professional Development materials

- <https://www.ncetm.org.uk/resources/50640>
- *“I thought the oracy side of those spines was really strong and really clear. Sometimes one of the trickiest things to do when planning a lesson is to think ‘OK, how many different ways can you say this?’ And of course you go into depth with the vocabulary, but you’re given stem sentences that you can link across other areas.” (Year 6 teacher)*

# The Primary Mastery Professional Development materials

- “Some of the best lessons we had out of the spine focused on the oracy point, where, for example, the whole class practice you would fill in the 7 times tables, using prior knowledge. So the stem sentence was ‘I know from my \_\_\_ times table that \_\_\_ times \_\_\_ is \_\_\_.’ And that helps to create that link. There’s that classic thing that children find tricky, is that duality between the tables – 3 times 7 is 21, but so is 7 times 3. And just by saying it, it starts to cement that.”*

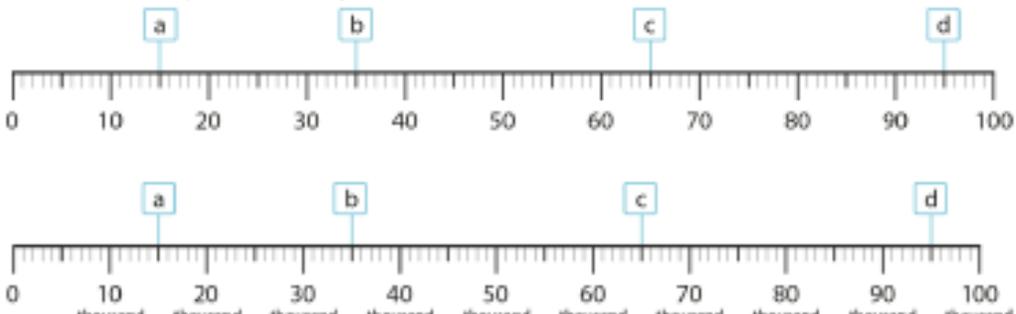

*(Year 3 teacher)*

# The Primary Mastery Professional Development materials

## Teaching point 2:

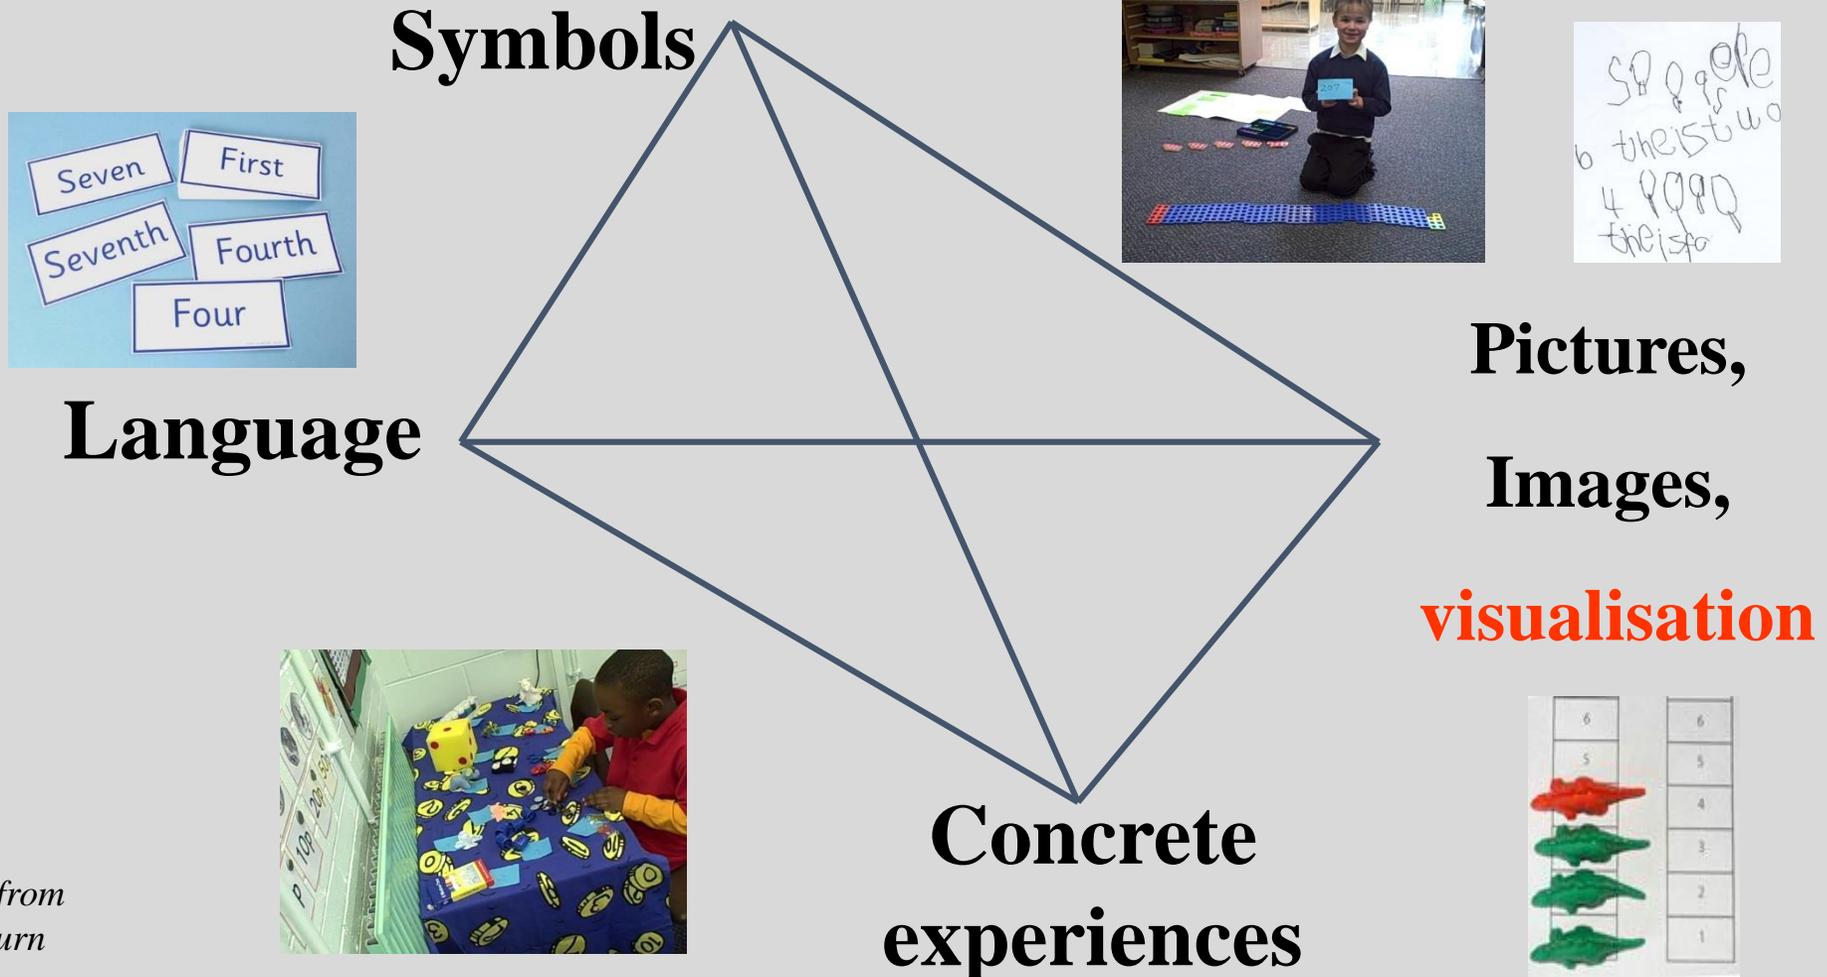

Multiples of 1,000 up to 1,000,000 can be placed in the linear number system by drawing on knowledge of the place of numbers up to 1,000 in the linear number system.

### Steps in learning

Guidance	Representations
<p><b>2:1</b> Now move on to locating the ordinal position of numbers in the number system and identifying numbers marked on a number line.</p> <p>In segment 1.22 <i>Composition and calculation: 1,000 and four-digit numbers</i>, children united to link what they know about three-digit numbers to four-digit numbers. Again in this teaching point, focus on building direct links from children's knowledge of two- and three-digit numbers to five- and six-digit numbers. The aim is to avoid common errors, like marking the midpoint of 10,000 and 20,000 as 10,005 or 10,500.</p> <p>Start by displaying the 0–100 number line, shown below. Identifying the numbers located at the small tick marks is a skill that will be deeply embedded by now. Draw arrows or boxes pointing to some numbers, as below, and ask children to explain how they can identify what these are. Once you have checked they can do this confidently, look at the second (unitised) number line shown below. Discuss the value of each of the labelled intervals ('10 thousand') and each of the smaller unlabelled intervals ('1 thousand'). Explicitly make the link back to the previous number line and ask children to identify the numbers shown by the boxes, using the following stem sentence to structure their answers: <b>'The midpoint of ___ and ___ is ___, so the midpoint of ___ thousand and ___ thousand is ___ thousand.'</b></p> <p>Once the children can work with the middle 'unitised' number line and verbally identify the midpoints, introduce the final number line shown below. As a class, count up in 10,000s, pointing to the digits as you go, to reinforce the connection between the three number lines; children should be quite confident counting up in 10,000s from <i>Teaching point 1</i>. Ask them to identify the same midpoints marked by the boxes, again linking to the previous two number lines. This time, make sure that the children are able to write the midpoints in numerals (e.g. '15,000') as well as say them in words (for example 'fifteen thousand').</p>	<p>Number lines:</p> <p>'What are the midpoints shown by a–d?'</p> 

# Making Connections

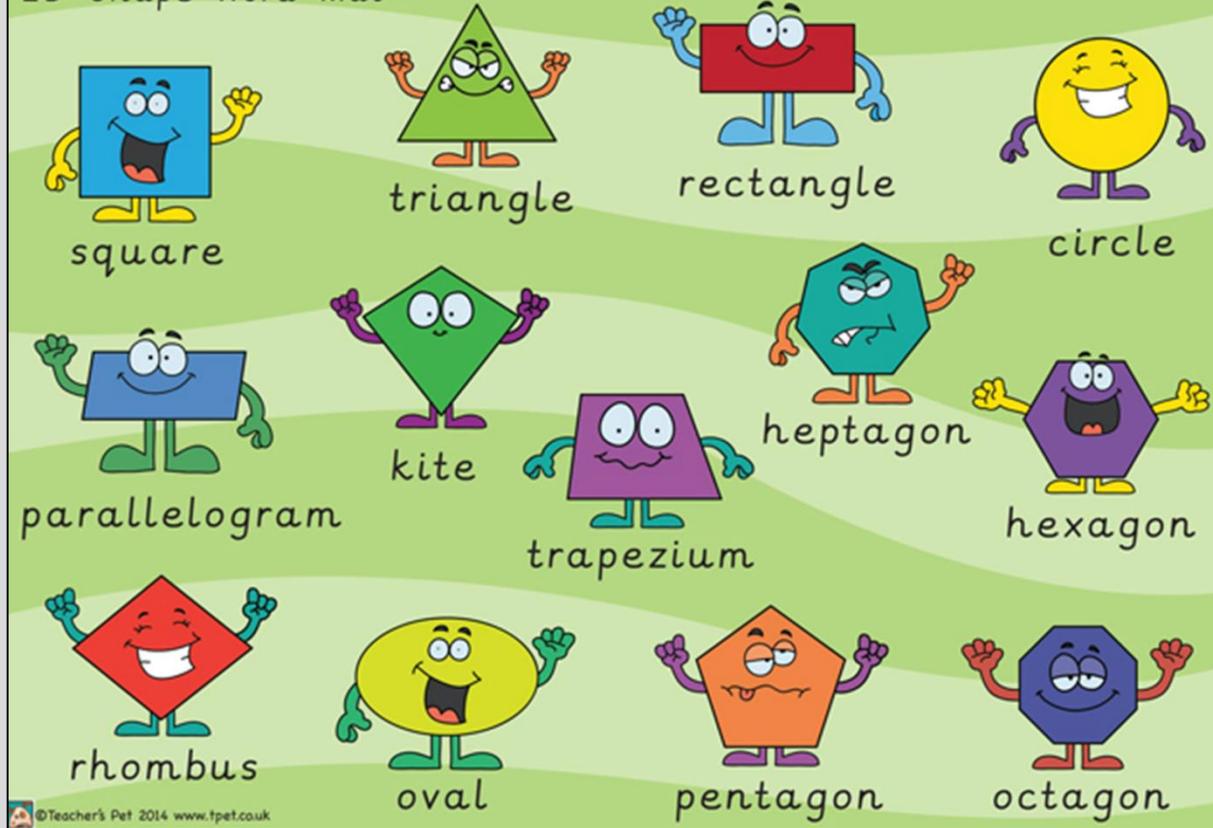

leads to secure understanding - the ability to manipulate and 'play' with number and other concepts

*Connections model from Haylock and Cockburn*

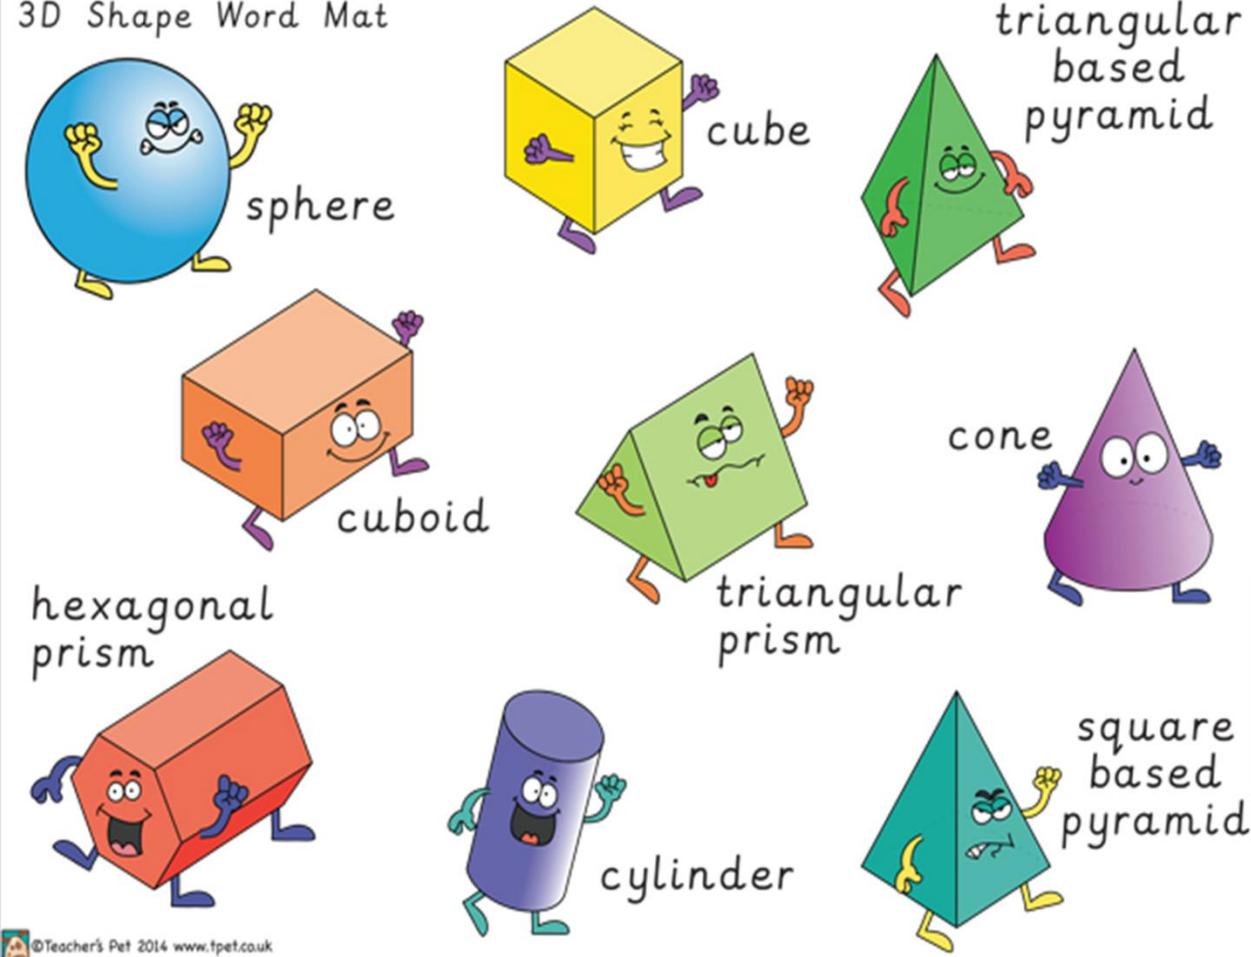

# Word mats

2D Shape Word Mat

©Teacher's Pet 2014 www.tpet.co.uk

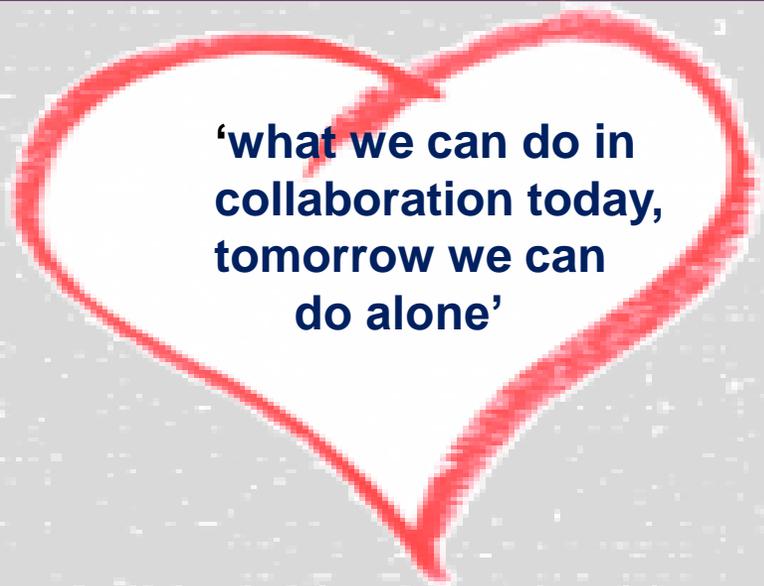

3D Shape Word Mat

©Teacher's Pet 2014 www.tpet.co.uk

# Equivalence – looks different but is of equal value

**‘what we can do in  
collaboration today,  
tomorrow we can  
do alone’**

*‘Learning is a social process and children learn from each other as well as from adults: language - especially spoken language - is what animates this process;.....’*

*Robin Alexander*

# Collaborative maths activities

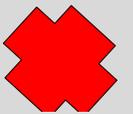

- Word Studies
- Vote with your feet
- Odd one out
- Agree / Disagree
- 60 Seconds
- Talk Partners
- Think, Pair, Square, Share
- Stem Sentences
- Explaining of models and diagrams
- Books / Stories

# Vote with your feet

Strongly Disagree

Disagree

- I will give you a statement
- You have to decide if you Agree, Strongly Agree or if you Disagree, Strongly Disagree
- Take 10 seconds to think about the statement
- Go and stand underneath the sign that best describes how you feel about the statement.
- You will be asked to express your opinion so make sure you have thought about why you think that way!

Strongly Agree

Agree

# Opinions please!

- **Doubling a number gives a higher number**

# Vote with your feet

- In my opinion doubling a number will.....  
for example....
- I disagree. I think that doubling a  
number will .....because.....
- I strongly believe that  
.....because.....
- On the other hand .....therefore

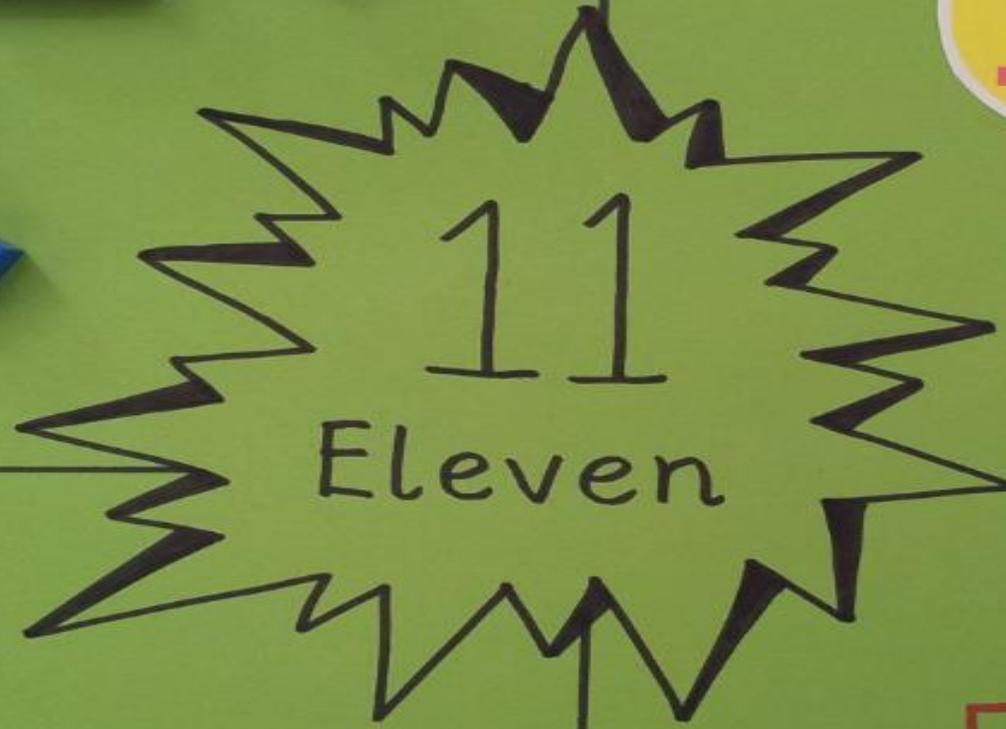

# Word studies

- A useful way to explore key vocabulary in depth
- Incorporating visual, auditory and kinaesthetic approaches
- Focus on category, meaning, and sentence level
- Collaborative

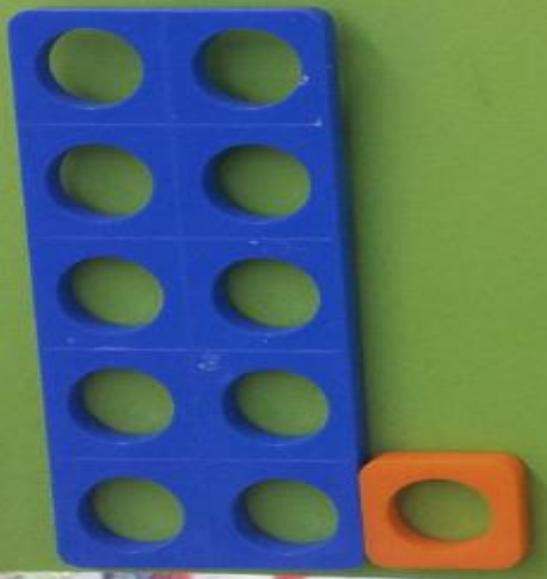

Objects:

What the number looks like:

Numicon:

The Number Word:

Eleven

*eleven*

ELEVEN

*eleven*

# Empty

What does the word mean?  
Empty is having nothing inside or on the surface

- An empty pot
- An empty bag
- An empty jar

## Sentences:

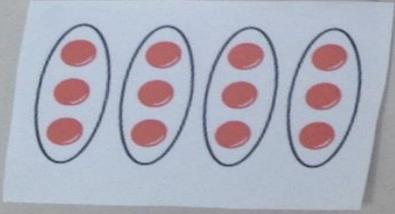

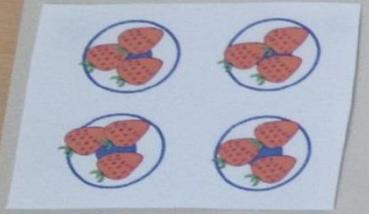

1. The cup is empty.
2. The car has got no petrol in, it is empty.
3. There is no work in the empty book.

Words  
 Share amounts  
 equal groups  
 split up  
 same as

Number Sentence  
 $15 \div 5 = 3$

# DIVIDE

Images

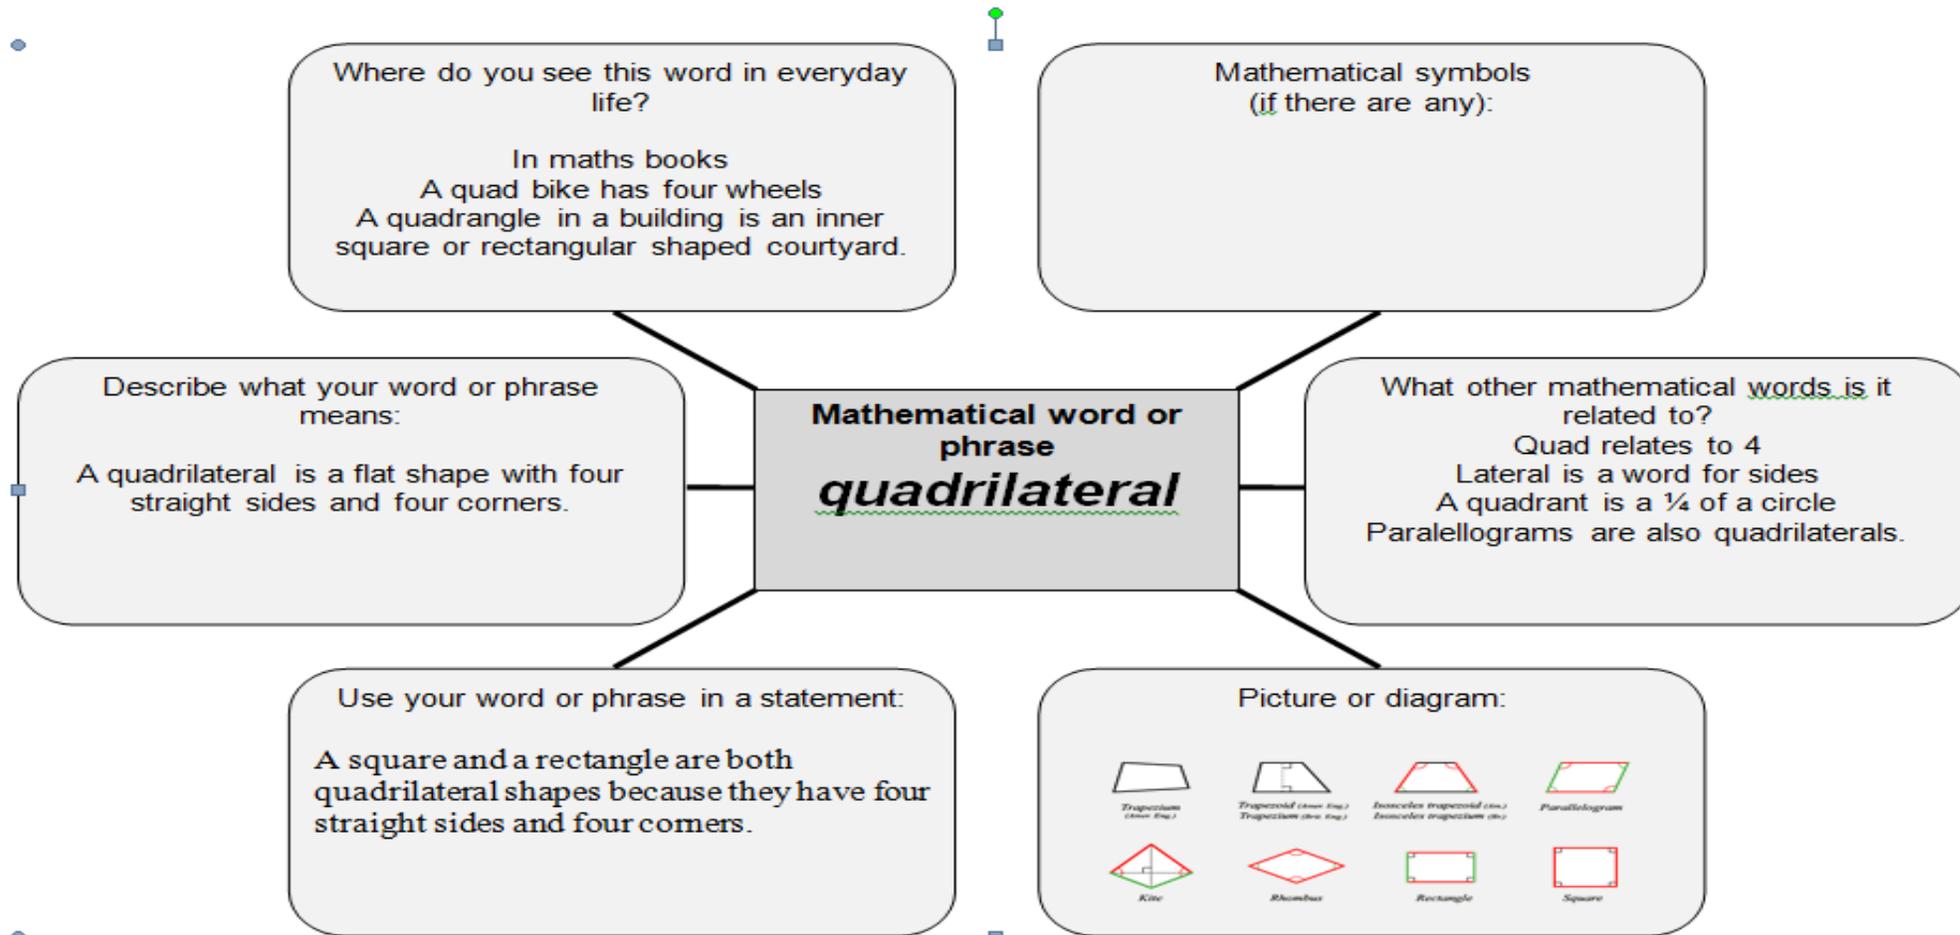

Success steps

- Choose
- share
- equal groups
- How many

## Negotiating meaning of vocabulary

Select one of the following words or phrases: quadrilateral, three quarters, multiple, century, right angle, difference. Talk in your group about what your word or phrase means and work together to agree the best way to complete each section of this poster.

Make a list of things which are spherical:

**Ball**  
**Planets**  
**Beads**  
**Some lampshades**

**Syllables**

**3**

**Word class**

**adjective**

**Describe what your word or phrase means:**

An object is spherical if it is round in shape.

**spherical**

**Synonyms**

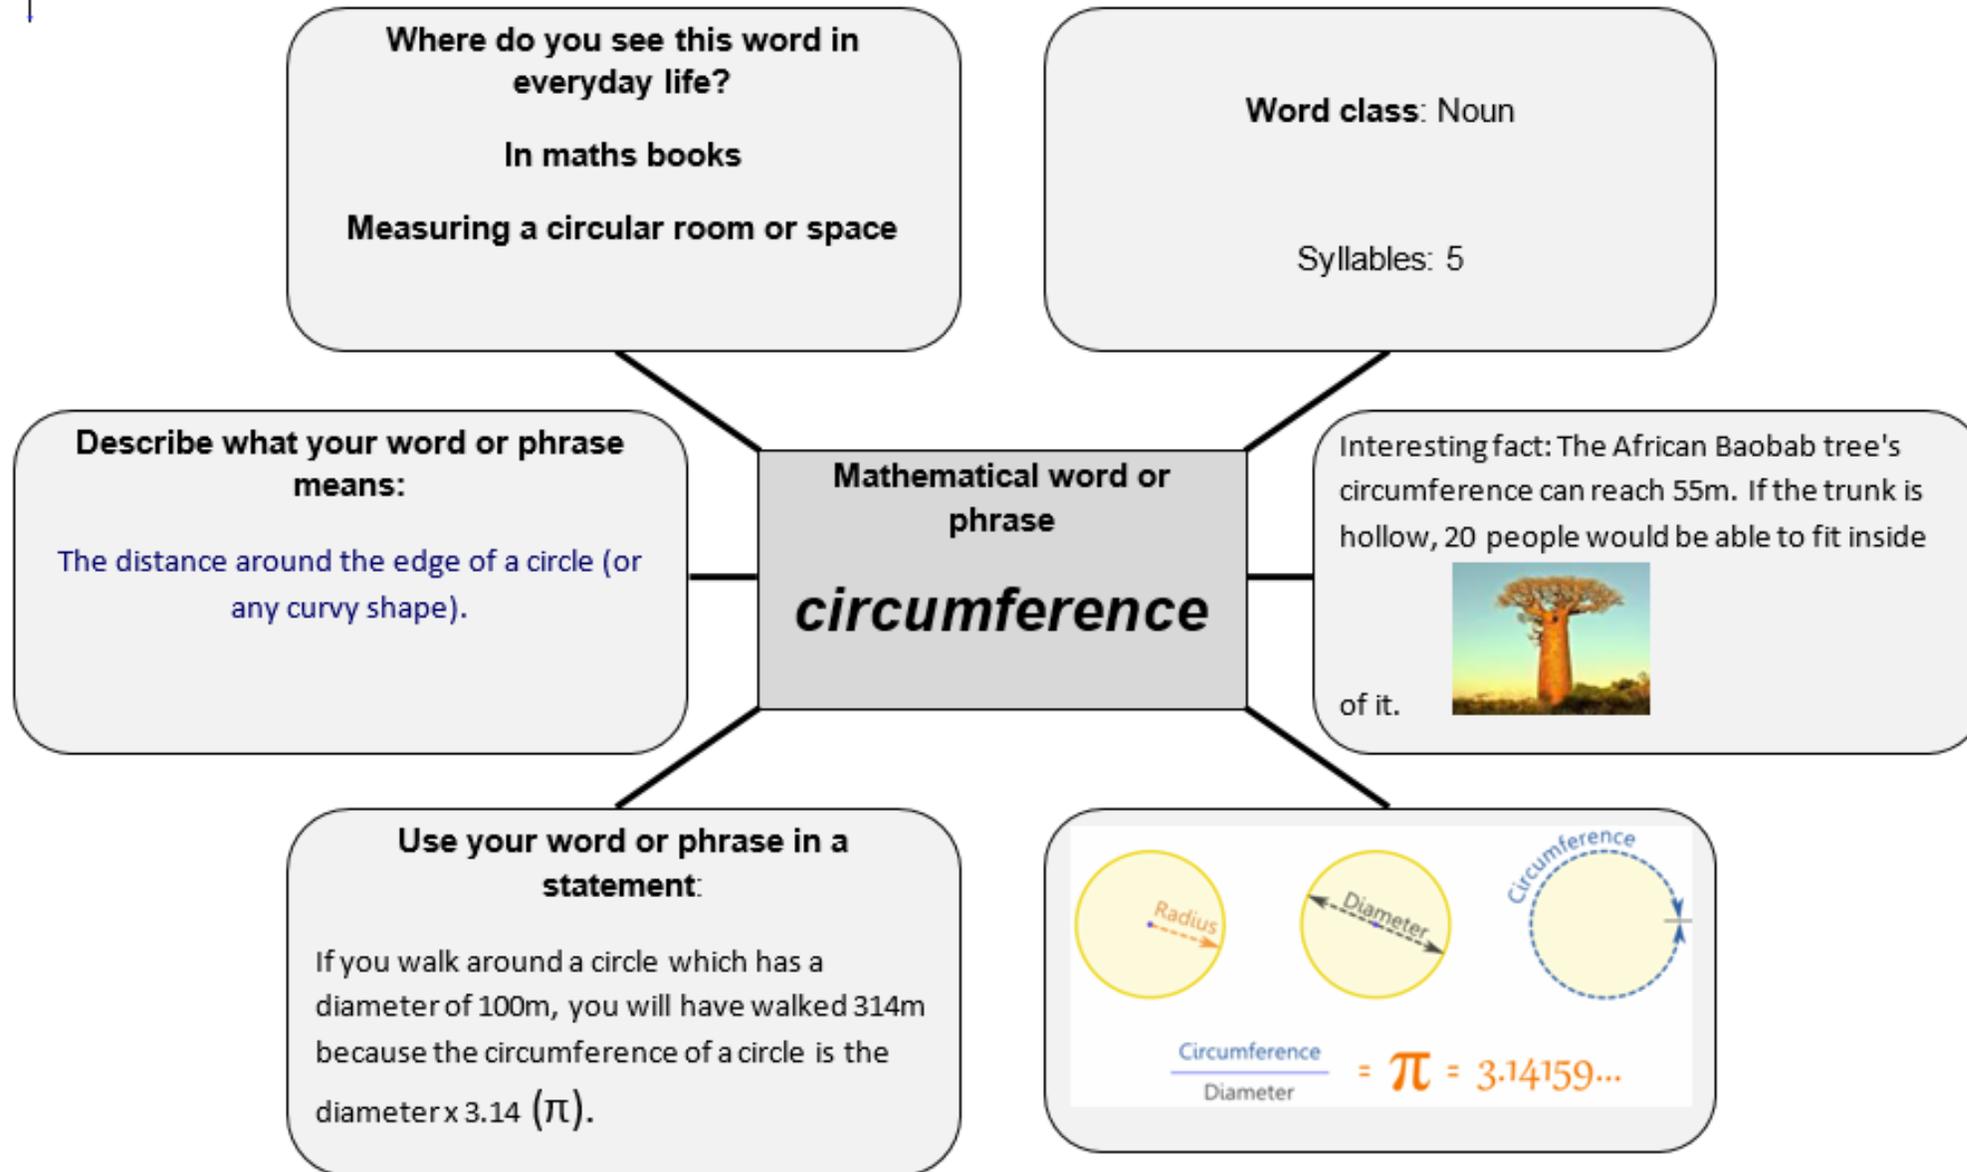

round, ball-shaped,  
like a sphere, curved,  
globular

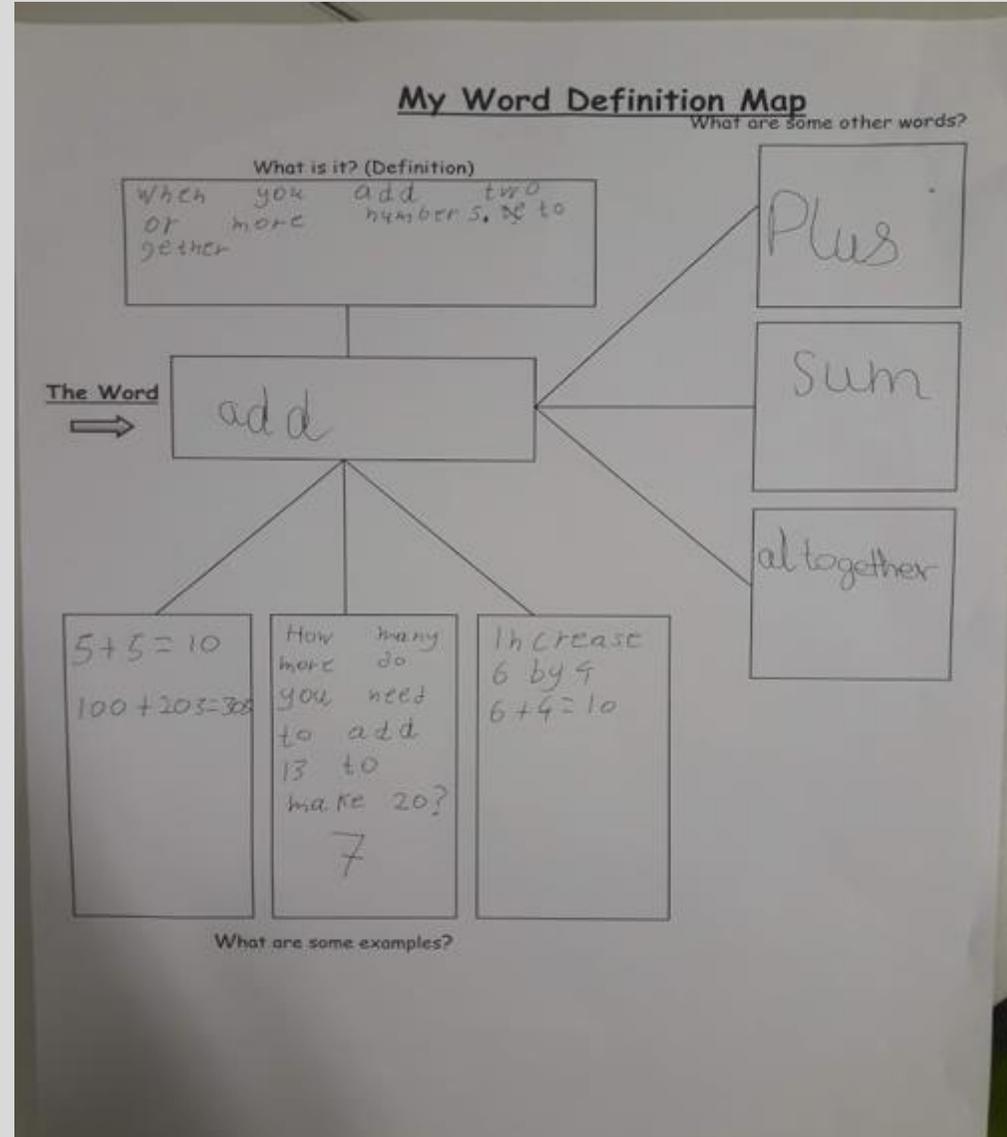

**Use your word or phrase in a sentence:**

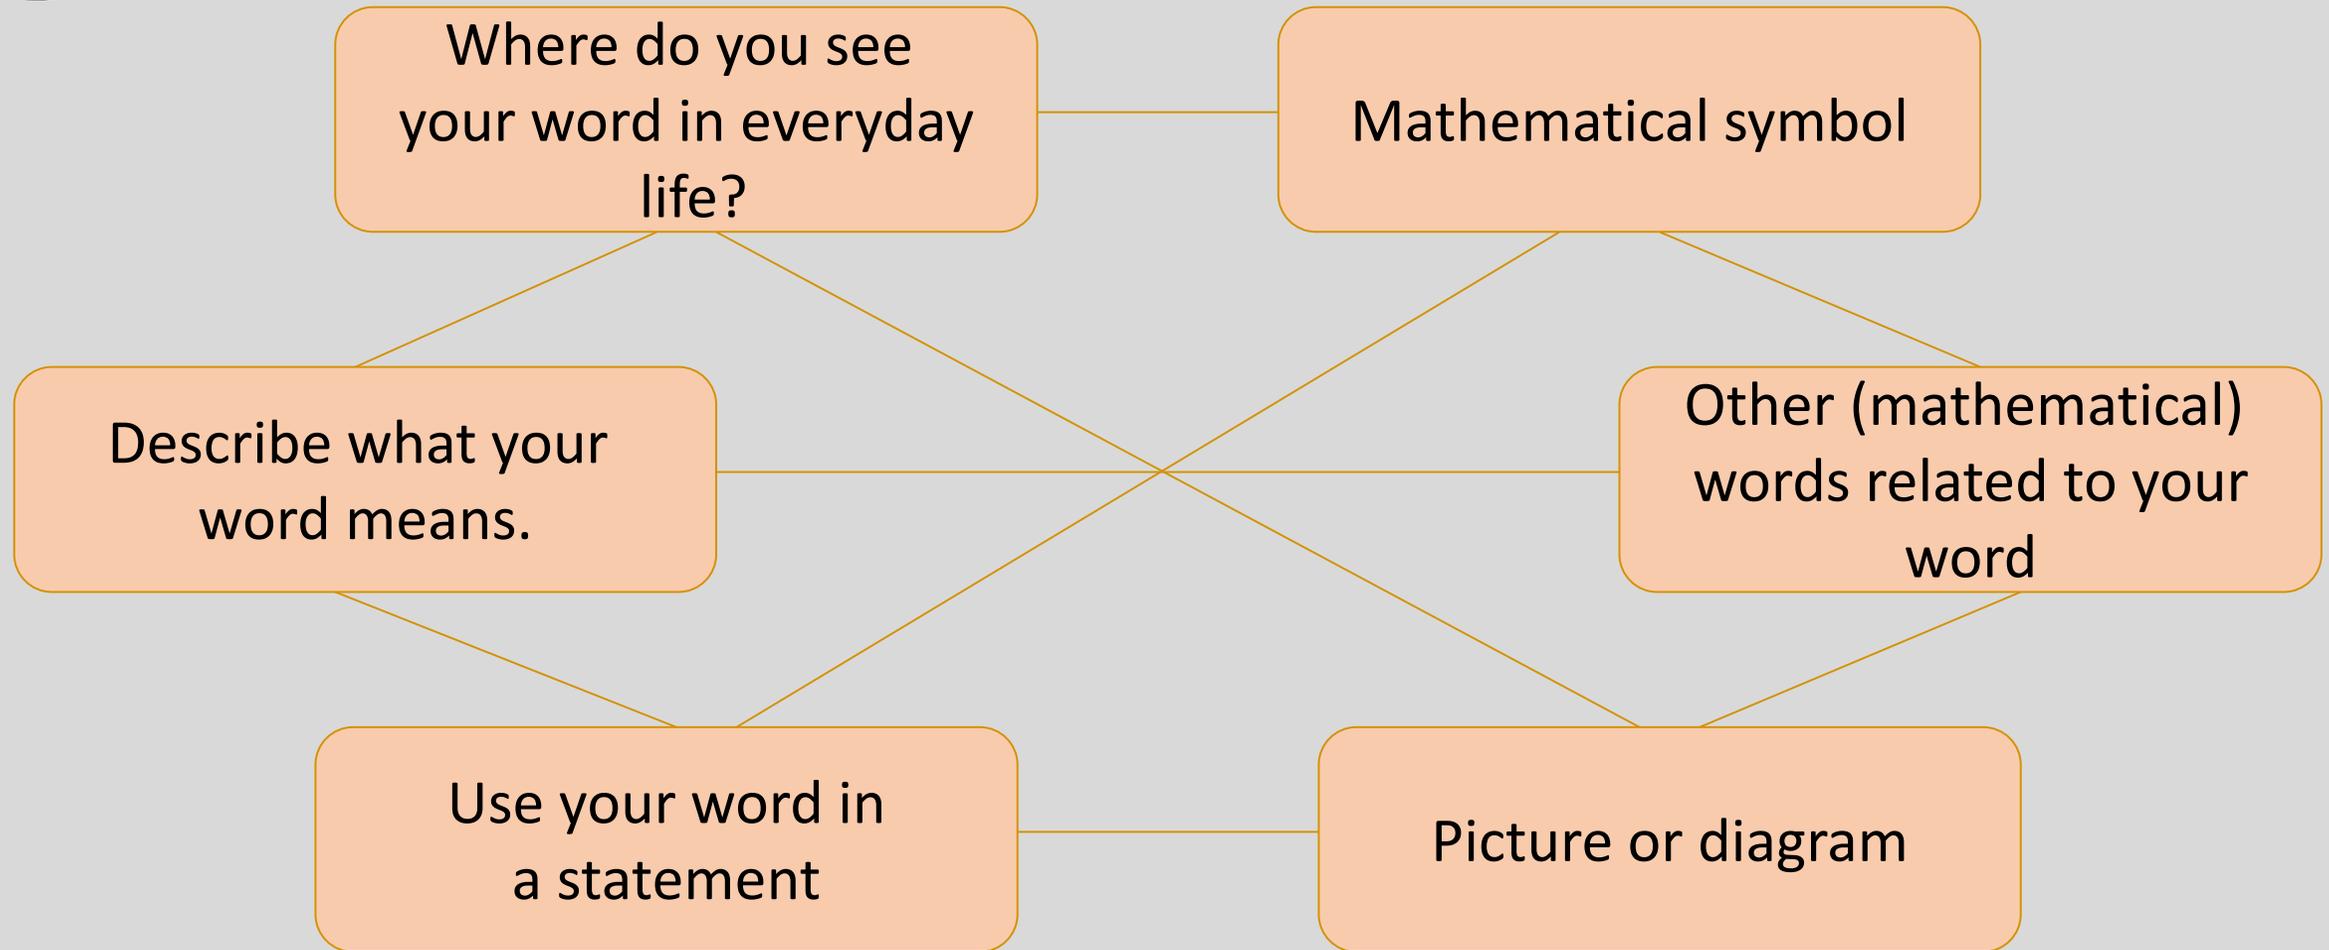

Many years ago people thought the earth was flat but now we know that the earth is spherical.

**Picture:**

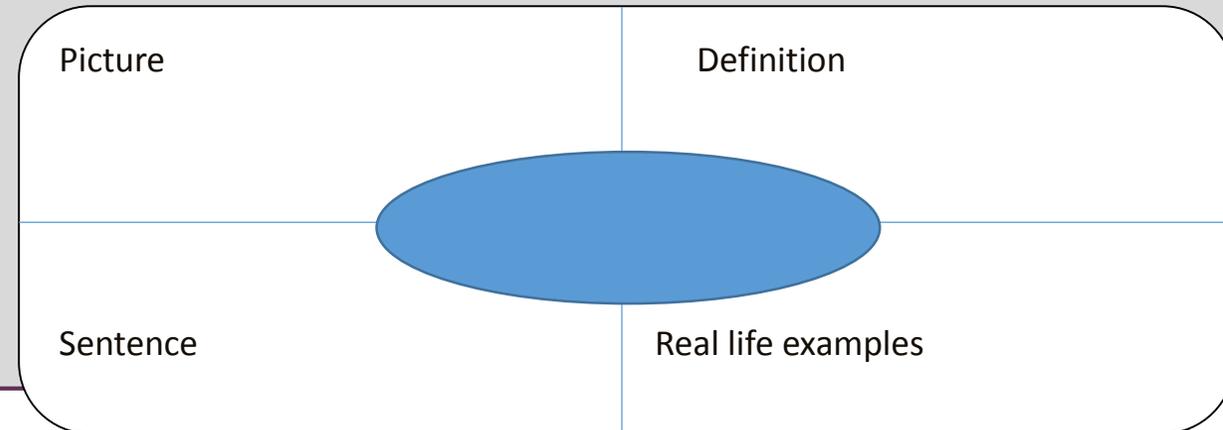

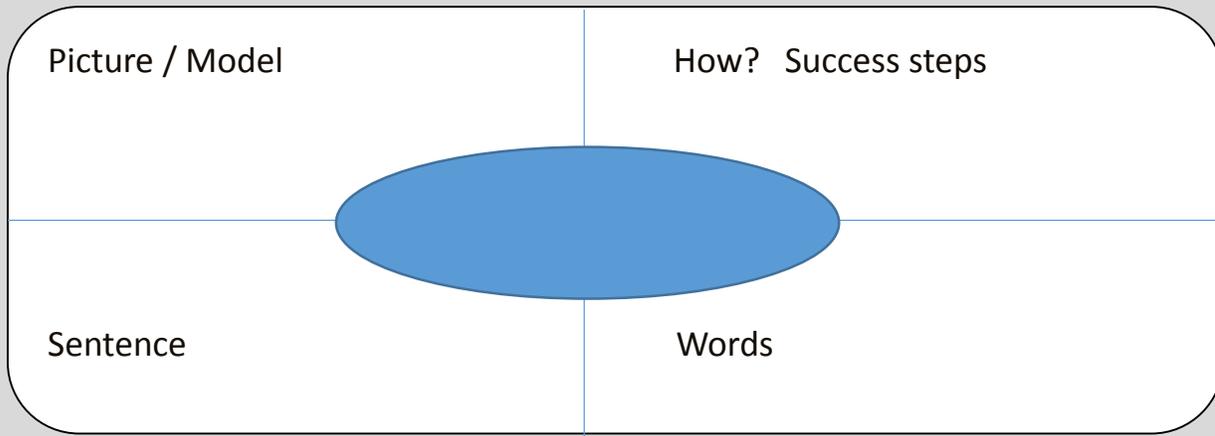

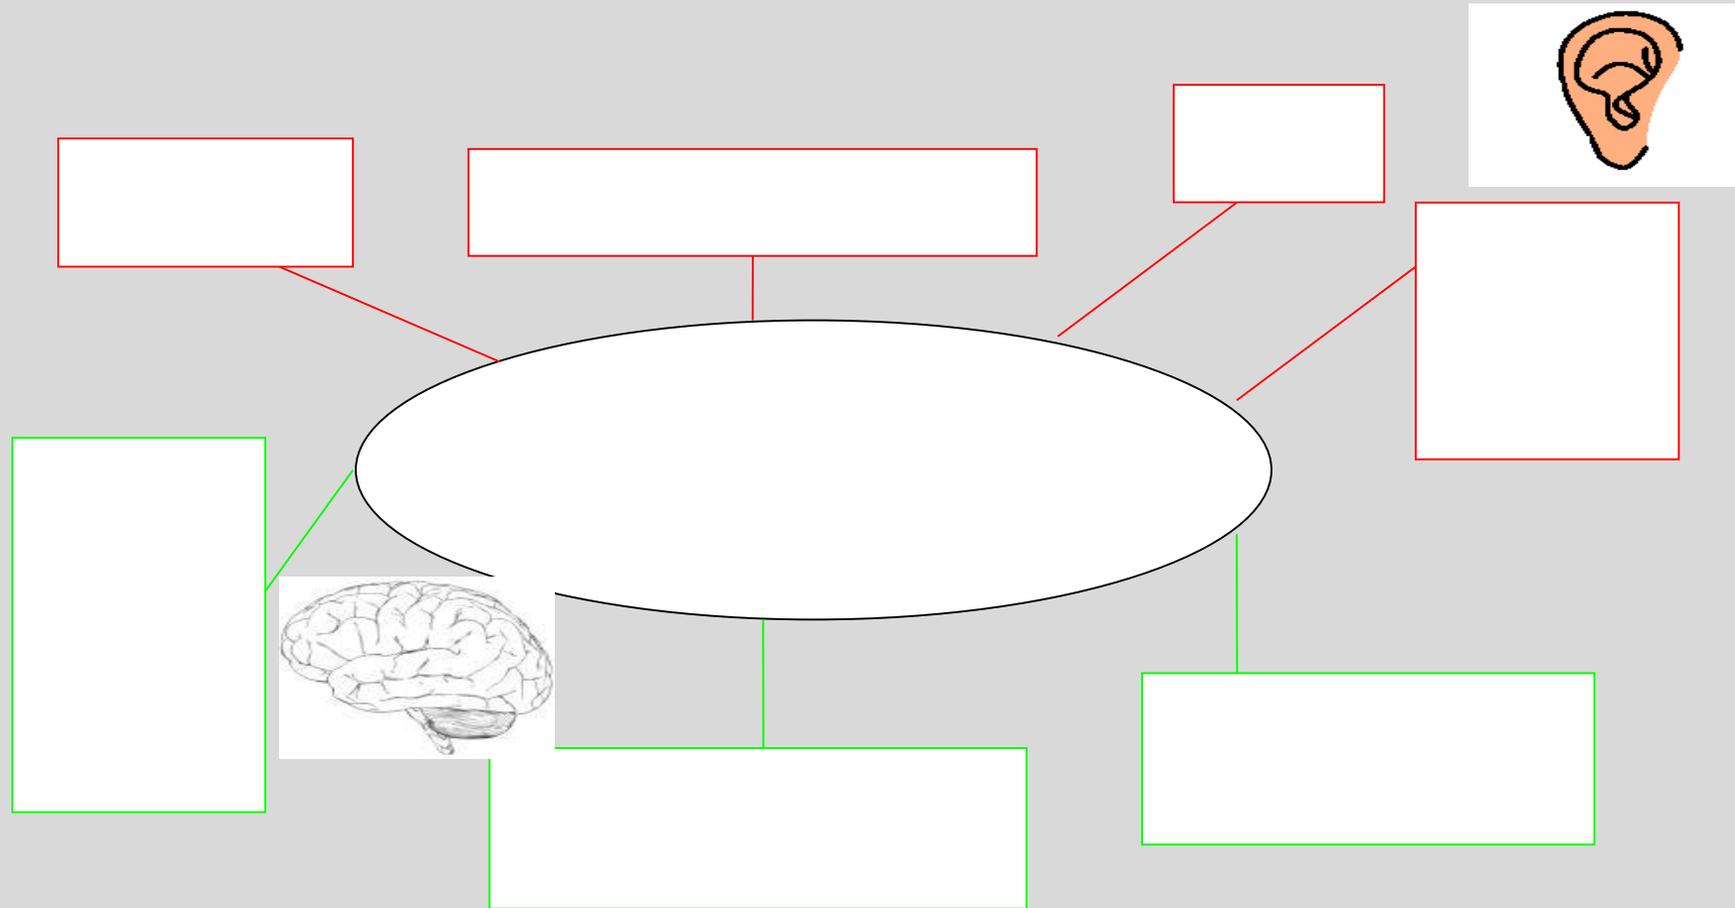

- Think of an objective you will cover this week or next week in maths
- Decide on the vocabulary that will be relevant to this objective or topic
- Decide on an unfamiliar or challenging tier 2 word and complete a word study for it

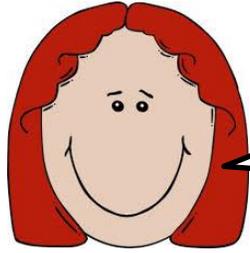

# Concept mats in mathematics

- Exploring misconceptions
- Promoting discussion, reasoning and problem solving
- Versatile

# Concept mat - Reception

## LO: To describe the size of objects

Ellie

The horse is taller than the dog

The dog is taller than the horse

Jack

Sohaib

They are the same height

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

height, size, taller, shorter,

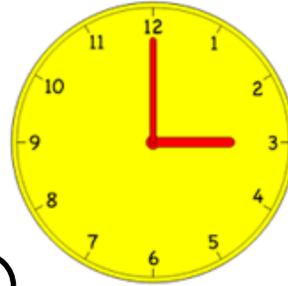

# Concept mat - Year 1

LO: To tell the time to the hour and half past

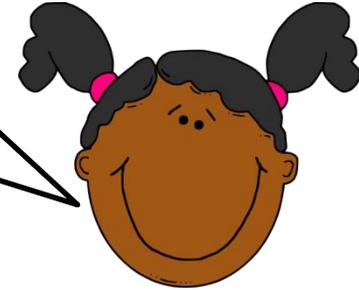

Sarah

The clock shows  
12 O'clock

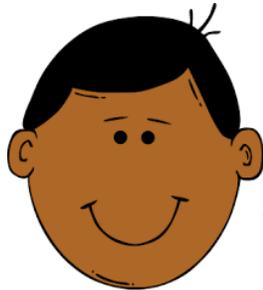

The clock says  
half past 3

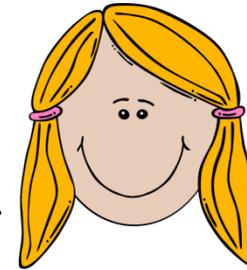

Tanesha

The clock says  
3 O'clock

The clock shows  
half past 12

Aamir

Emma

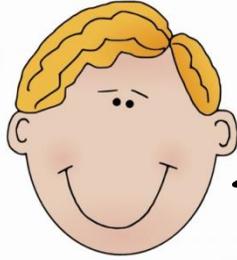

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

clock, minute hand, hour hand, pointing, o'clock, half past

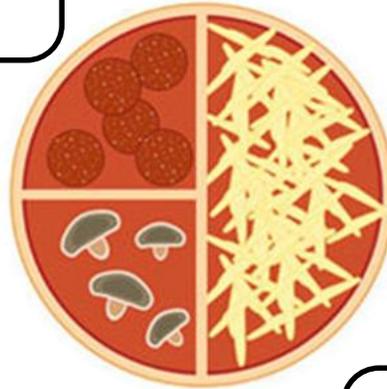

## Concept mat - Year 2

LO: To recognise  $\frac{1}{4}$  of a shape

Sam

One quarter of the pizza is cheese

One quarter of the pizza is mushrooms

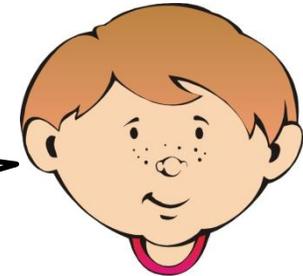

Olivia

Abdul

Three quarters of the pizza is cheese

Half of the pizza is pepperoni

Harry

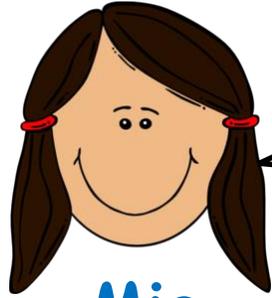

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

part, equal part, one whole, half, quarter,

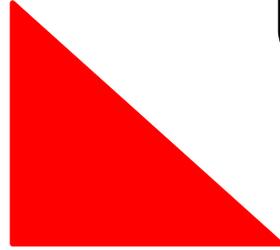

# Concept mat - Year 3

## LO: To identify angles in a shape

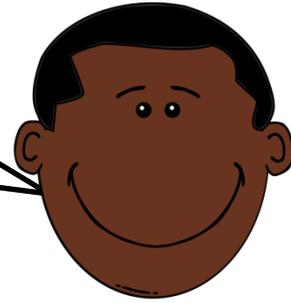

Mia

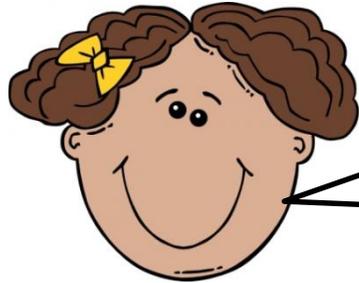

The triangle has  
1 right angle

The triangle has  
2 right angles

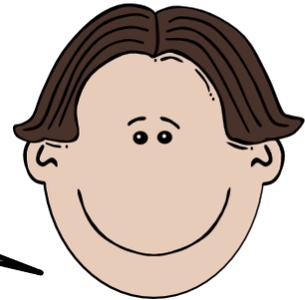

Rahim

Katerina

I can see 2 angles  
less than a right angle

I can see 2 angles  
greater than a  
right angle

Lewis

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

right angle, less than, greater than,

# Concept mat - Year 4

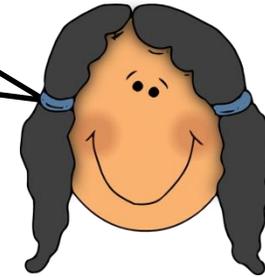

LO: To count in multiples of 25

Ava

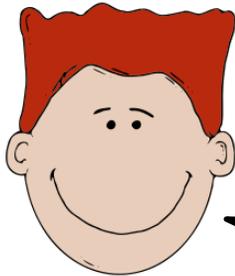

The next number will be 75

The next number will be 125

Estela

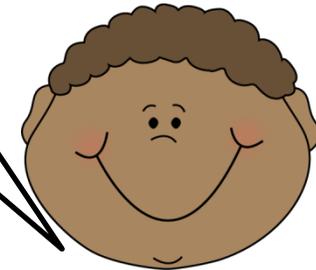

25, 50, 75, 100 ...

Ben

The next number will be 25 more than 100

The next number will be 225

Fazil

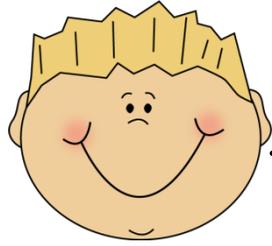

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

multiples, sequence, pattern, digit, continue, predict

# Concept mat - Year 5

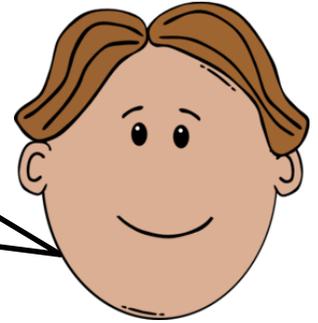

LO: To read Roman numerals to 1000

The number is  
145

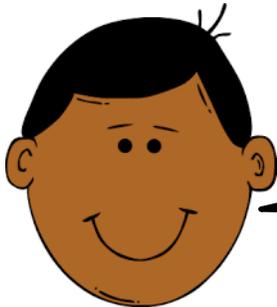

Thomas

The number is  
larger than 100

Jakub

CLV

The number is 551

Farouk

The number is  
155

Katie

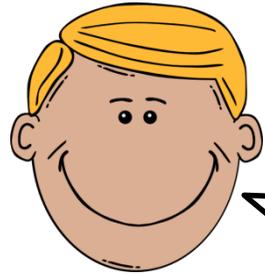

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

stands for, represents, equal to

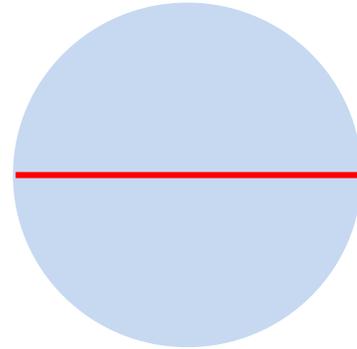

# Concept mat - Year 6

## LO: To name parts of a circle

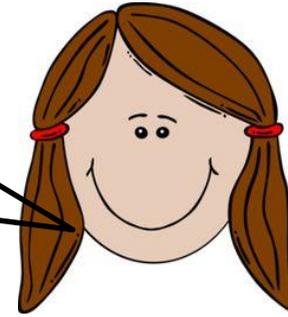

Noah

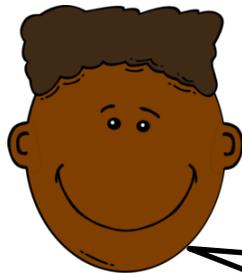

The red line represents the diameter of a circle

The red line is the radius of a circle

Amy

Talib

The red line is the circumference of a circle

The red line is twice the radius of a circle

Delmar

I know \_\_\_\_\_ is right because \_\_\_\_\_

I know \_\_\_\_\_ isn't right because \_\_\_\_\_

circle, radius, diameter, circumference, twice, half

# Substitution tables

- Provide scaffolded support for recording language-based answers to mathematical problems

# Substitution table

Substitution tables are best used with pupils who have begun to engage a little with English, and who want to produce writing in their books like their peers. The alternative would be copying and not understanding what is being copied.

The pupils can make some word choices and begin to see how sentences are structured.

They should be able to read the sentence back, or select the correct image if they are being silent.

| Capacity

A

B

C

D

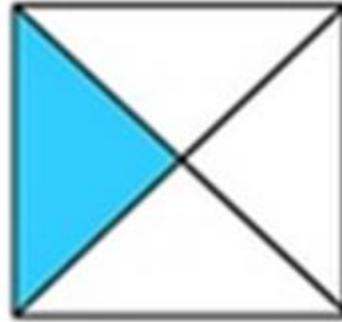

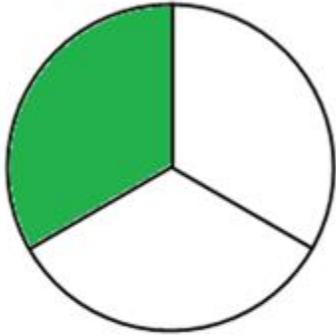

E

F

	A			
Container	B	is	empty	.
	C		full	
	D		half-full	
	E			
	F			

Substitution table - Fractions

A	quarter	is	the	whole	divided	into	2	equal	parts	.
	half						3			
	third						4			

Substitution table - Shape

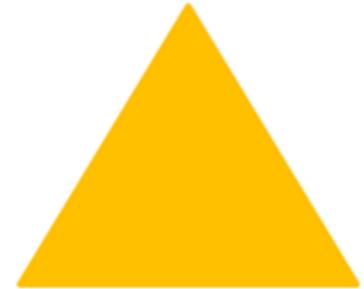

square

circle

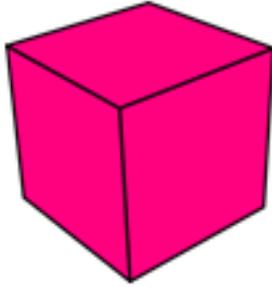

rectangle

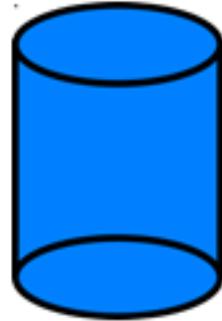

triangle

A	circle triangle square rectangle	has	1 3 4	side sides	and	0 3 4	corners	.
---	---	-----	-------------	---------------	-----	-------------	---------	---

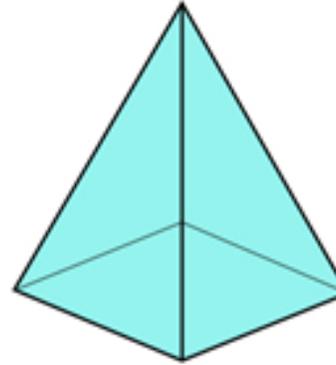

Substitution table - 3D shapes

cube

cylinder

pyramid

cone

A	cone cube pyramid cylinder	has	2 3 5 6	faces	and	0 1 5 8	vertices	.
---	-------------------------------------	-----	------------------	-------	-----	------------------	----------	---

# Group discussion

Take notes  
to help  
your  
thinking

## Think:

Read the  
problem  
carefully and  
highlight key  
words.

## Pair:

Talk to one  
person about  
your ideas

Consider  
strategies for  
turn taking

## Square:

Join up with  
another pair  
& discuss  
your ideas

## Share:

Share an idea  
from your  
group

## Challenges:

1. A number rounded to the nearest tenth is 5.4. What number could I have rounded? Find the smallest and largest possible numbers.
  
2. A decimal number between 11 and 20 rounds to the same number when rounded to the nearest tenth and the nearest whole number. What could this number be? Is there more than one option? Explain why.

## Universality of mathematical symbols and notation

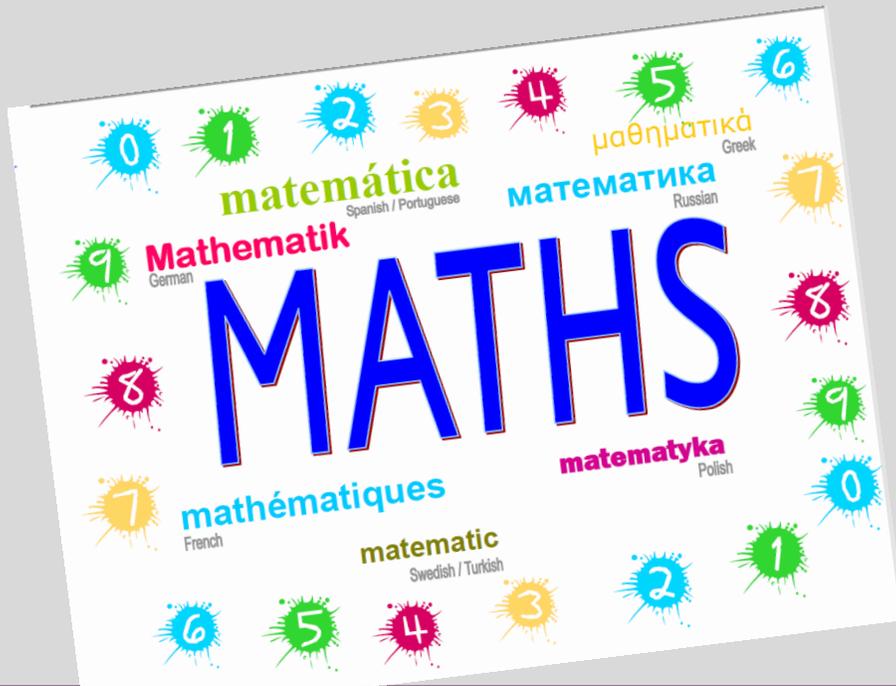

$$4 \cdot 5$$

$$4 \cdot 5 = 20$$

$$12:6 = 2:1$$

$$12:6 = 2$$

# Exploring dual language resources

MATH GLOSSARY  
Grades 3-5

ENGLISH	ROMANIAN
common factor	factor comun
common multiple	multiplu comun
commutative property of addition	proprietate de comutativitate a adunării

cubic centimeter (cm <sup>3</sup> )	centimetru cub (cm <sup>3</sup> )
cubic unit	unitate cubică
cup (c)	reuniune (U)

# EAL resources

- <https://ealresources.bell-foundation.org.uk/teachers/eal-nexus-resources>

## Maths scanning game

This colourfully designed resource can be used to develop scanning techniques and also to revise and consolidate basic maths vocabulary. This resource consists of a sheet full of words relating to seven maths topics, with an accompanying information sheet with topic headings and word lists.

## How long is a minute?

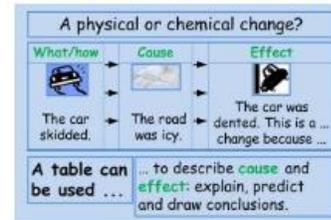

We are learning to

- understand how long a minute lasts

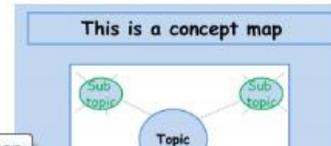

Learners find out how many times they can write their name, catch a beanbag, walk to the stairs and back and do other fun tasks in one minute and record their results in different ways. There are activities which promote speaking and listening between partners and/or small groups and is suitable for use with the whole class.

## Graphic organiser: classifying - table

The versatility of visual organisers makes them an excellent tool to support learners with English as an additional language.

## Graphic organiser: classifying - concept map

The versatility of visual organisers makes them an excellent tool to support learners with English as an additional language.

*This new revised webpage tries to make each activity clear in one poster. We have revised and updated many of the activities. We will post our most recent activity in the box on the right...*

### Capacity Track Game

Question track:  
How many millilitres in..

Half a litre, Sixteen litres, 2 litres, 50 litres, 12.5 litres, Thirty litres, Two and a half litres

### 12 and 24 Clock Talking Times: Card Sorting

1:00 in the morning	1:00 in the afternoon
9:00 in the evening	8:00 in the morning
12:00 midday	7:00 in the evening
01:00	13:00
21:00	08:00
12:00	19:00

### Four in a Row Addition and Subtraction

This is a game for two players or two pairs of players. You need about 15 counters in two colours. Take turns to choose two numbers from the box and add them together. Place your counter on the resulting number on the grid. The first player to get four in a row on the grid is the winner.

17	5	4
11	9	
13	16	
8	0	20

21	15	9
28	22	26

### Bank Four

Designed for KS1

A collaborative game for 2-4 players to reinforce the rapid recall of addition and subtraction of 2/5/10 to numbers up to 100.

das zayada      das zayada      panch thora

10                      20                      20

dho zayada

4                      **With transliterated version in Panjabi.**

# Dictionary websites

- <http://www.amathsdictionaryforkids.com/dictionary.html>
- [http://go.hrw.com/math/midma/gradecontent/manipulatives/Glossary/Glossary.html?sz\\_term=undefined](http://go.hrw.com/math/midma/gradecontent/manipulatives/Glossary/Glossary.html?sz_term=undefined)

## Reasoning and Convincing at KS1

It's quite hard to pin down what 'reasoning' looks like. At KS1 we're looking for good 'because' statements. And if there are two or more which make a chain, that's progress.

### I Like ...

Stage: 1 ★

Mr Gilderdale is playing a game with his class. What rule might he have chosen? How would you test your idea?

### In the Playground

Stage: 1 and 2 ★★

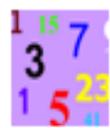

What can you say about the child who will be first on the playground tomorrow morning at breaktime in your school?

### A Bag of Marbles

Stage: 1 ★★

Use the information to describe these marbles. What colours must be on marbles that sparkle when rolling but are dark inside?

### How Odd

Stage: 1 ★★

This problem challenges you to find out how many odd numbers there are between pairs of numbers. Can you find a pair of numbers that has four odds between them?

### Two Numbers Under the Microscope

Stage: 1 ★★

This investigates one particular property of number by looking closely at an example of adding two odd numbers together.

### Lots of Lollies

Stage: 1 ★★★

Frances and Rishi were given a bag of lollies. They shared them out evenly and had one left over. How many lollies could there have been in the bag?

## Reasoning and Convincing at KS2

John Mason talks about convincing yourself, convincing a friend and convincing a sceptic. If your pupils don't know what a sceptic is, now's a good time to help them to understand!

### Beads and Bags

Stage: 1 and 2 ★

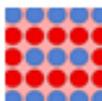

How could you put these three beads into bags? How many different ways can you do it? How could you record what you've done?

### Fifteen Cards

Stage: 2 ★

Can you use the information to find out which cards I have used?

### Spot Thirteen

Stage: 2 ★

Choose 13 spots on the grid. Can you work out the scoring system? What is the maximum possible score?

### Money Bags

Stage: 2 ★★

Ram divided 15 pennies among four small bags. He could then pay any sum of money from 1p to 15p without opening any bag. How many pennies did Ram put in each bag?

### Sealed Solution

Stage: 2 ★★

Ten cards are put into five envelopes so that there are two cards in each envelope. The sum of the numbers inside it is written on each envelope. What numbers could be inside the envelopes?

### Magic Vs

Stage: 2 ★★

Can you put the numbers 1-5 in the V shape so that both 'arms' have the same total?

### The Puzzling Sweet Shop

Stage: 2 ★★

There were chews for 2p, mini eggs for 3p, Chocko bars for 5p and lollypops for 7p in the sweet shop. What could each of the children buy with their money?

### What's it Worth?

Stage: 3 and 4 ★

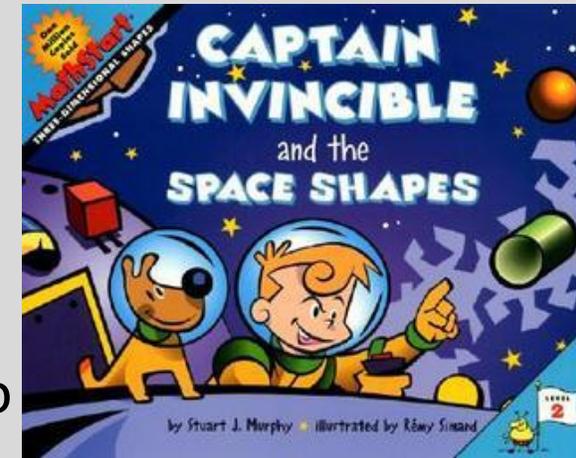

There are lots of different methods to find out what the shapes are worth - how many can you find?

# Conclusion

- The ability to verbalise thinking and to justify answers is a vital skill in ensuring children understand and retain mathematical concepts.
- This requires a focus not just on key vocabulary but also on sentence structures which must be regularly modelled and scaffolded for children.
- Listening to your pupils talk is also the best feedback you can get to assess what they are actually learning.
- It is essential therefore that maths lessons and activities have speaking and listening at their core.
